Aim: Little is known about the distribution and methods of delivery of low vision services across the United Kingdom. The purpose of this study was to determine the type and location of low vision services within the UK. Methods: Survey by means of a 29 point postal questionnaire, followed when necessary by a five point telephone questionnaire. All known potential providers of low vision services (n = 2539) including hospitals (n = 277), optician/optometry practices (n = 1683), social ...

The fragmented and uneven pattern of services for people with low vision reflects long-standing problems. Our sponsors established a Working Group and asked us, within the space of a year, to take these issues in hand. This report is the result. It represents a lot of hard work by the Group's members, who have faced up with energy and commitment to many difficult and often contentious issues ...

The variable quality of provision of low vision (LV) care in the UK provoked considerable discussion in the 1990s. Recognising weaknesses such as fragmentation in service delivery led to an emphasis more recently on developing services that prioritise multi-disciplinary working (eg, Reeves et al, 1 Hinds et al 2 and Court et al 3).LV services are critical for those needing help following sight ...

Low vision is a visual impairment, not total vision blindness, which results in a permanent decrease in the acuity of an individual's vision field. Unlike normal vision impairments such as nearsightedness and farsightedness, low vision can't be fully corrected by using standard vision aids such as eyeglasses or contacts. According to the Association for the Blind and Visually Impaired ...
